FinCrime Process Mining

Financial Crime Investigation Analytics Platform

Real-time visibility into investigation workflows. Identify bottlenecks. Prove improvement. Drive efficiency.

Confidential • April 2026

The Problem

Financial crime operations teams are flying blind

Banks invest billions in financial crime investigations — Suspicious Activity Reports, Transaction Monitoring, KYC, Fraud, and Sanctions screening. But operations leaders often cannot answer the most basic questions about their own processes:

THE QUESTION	WHY IT MATTERS
Where are our cases right now?	Without real-time status visibility, managers cannot allocate resources or identify backlogs until it's too late
Where are the bottlenecks?	Cases stuck awaiting information or in review queues increase regulatory risk and cost
Are we getting faster?	Regulators and senior management expect measurable, demonstrable improvement — not anecdotal evidence
Can we prove our audit trail?	Every state change must be traceable with timestamps and user attribution for regulatory examinations

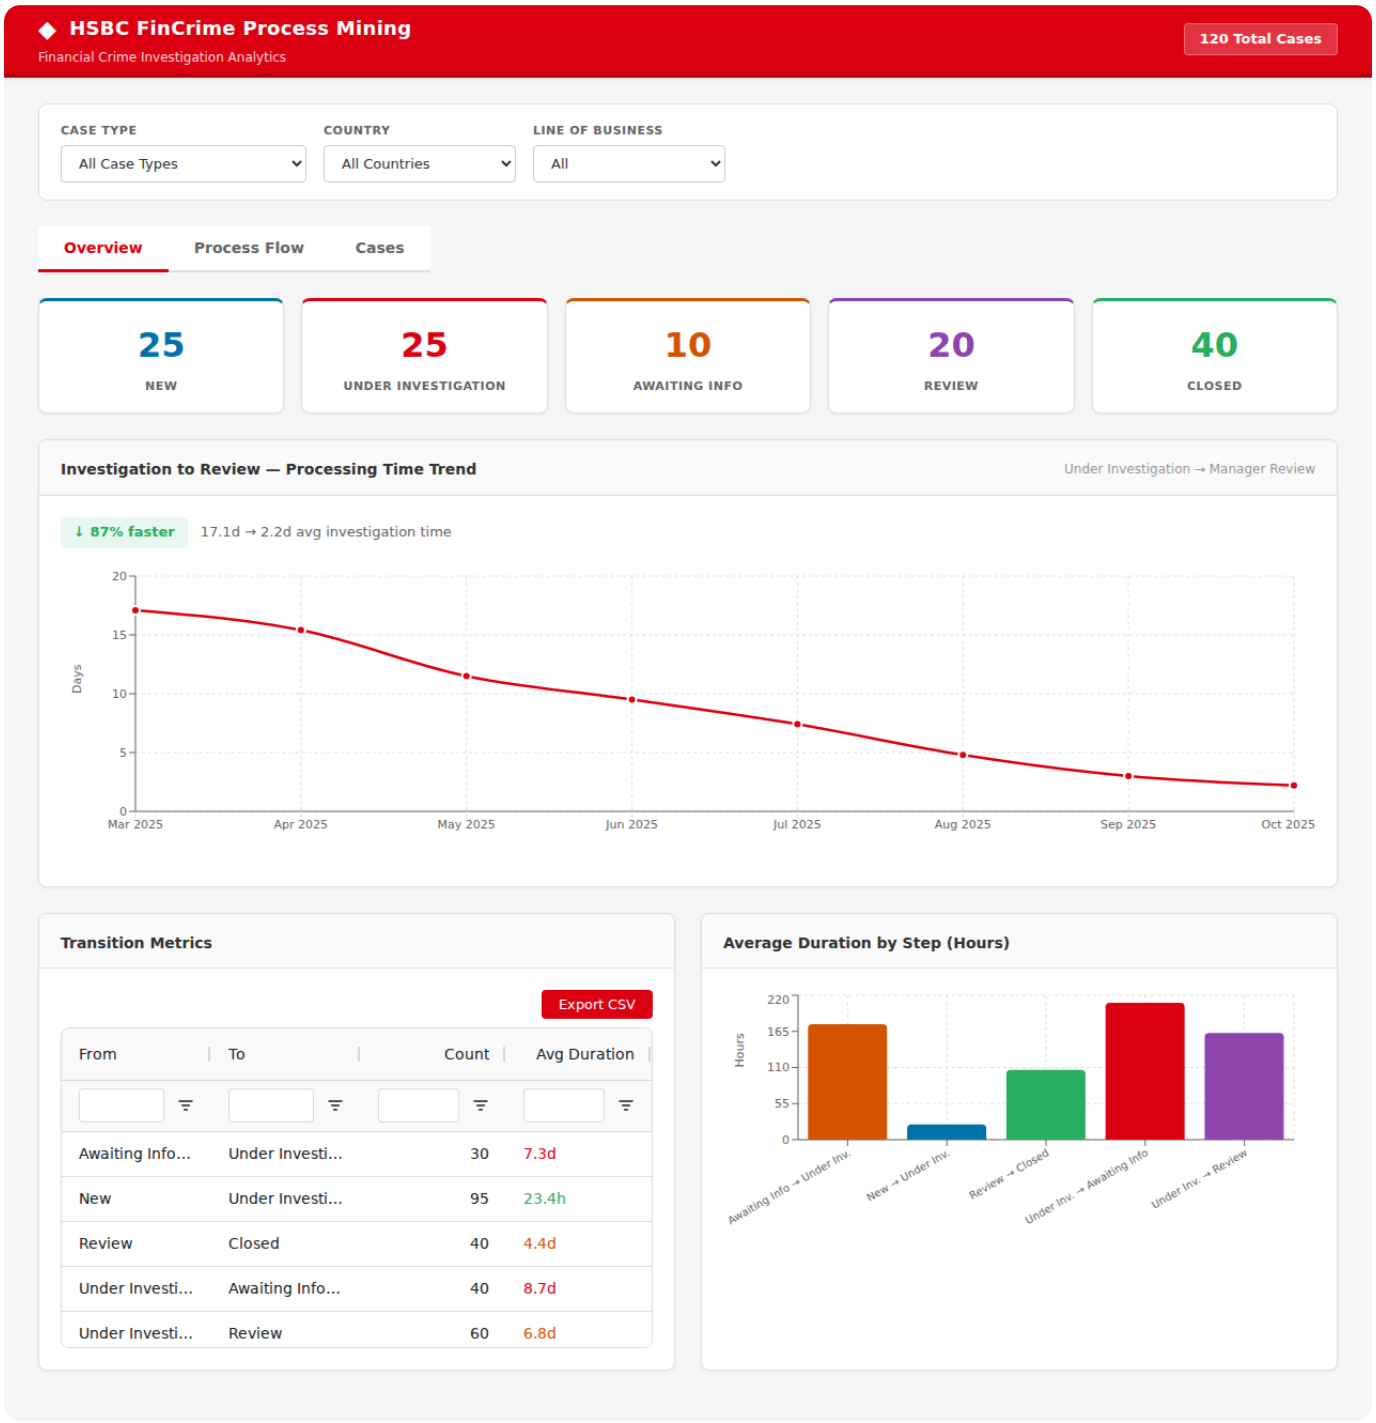
> "We know we've improved, but we can't quantify it. When the regulator asks, we're scrambling to pull data from three different systems."

Existing solutions — manual spreadsheets, enterprise BI tools, or custom SQL reports — are slow to build, expensive to maintain, and always out of date by the time they reach a decision-maker.

The Solution

A purpose-built analytics dashboard for financial crime investigations

The **FinCrime Process Mining Platform** gives operations teams complete, real-time visibility into how investigation cases flow through the organisation — from creation to closure.

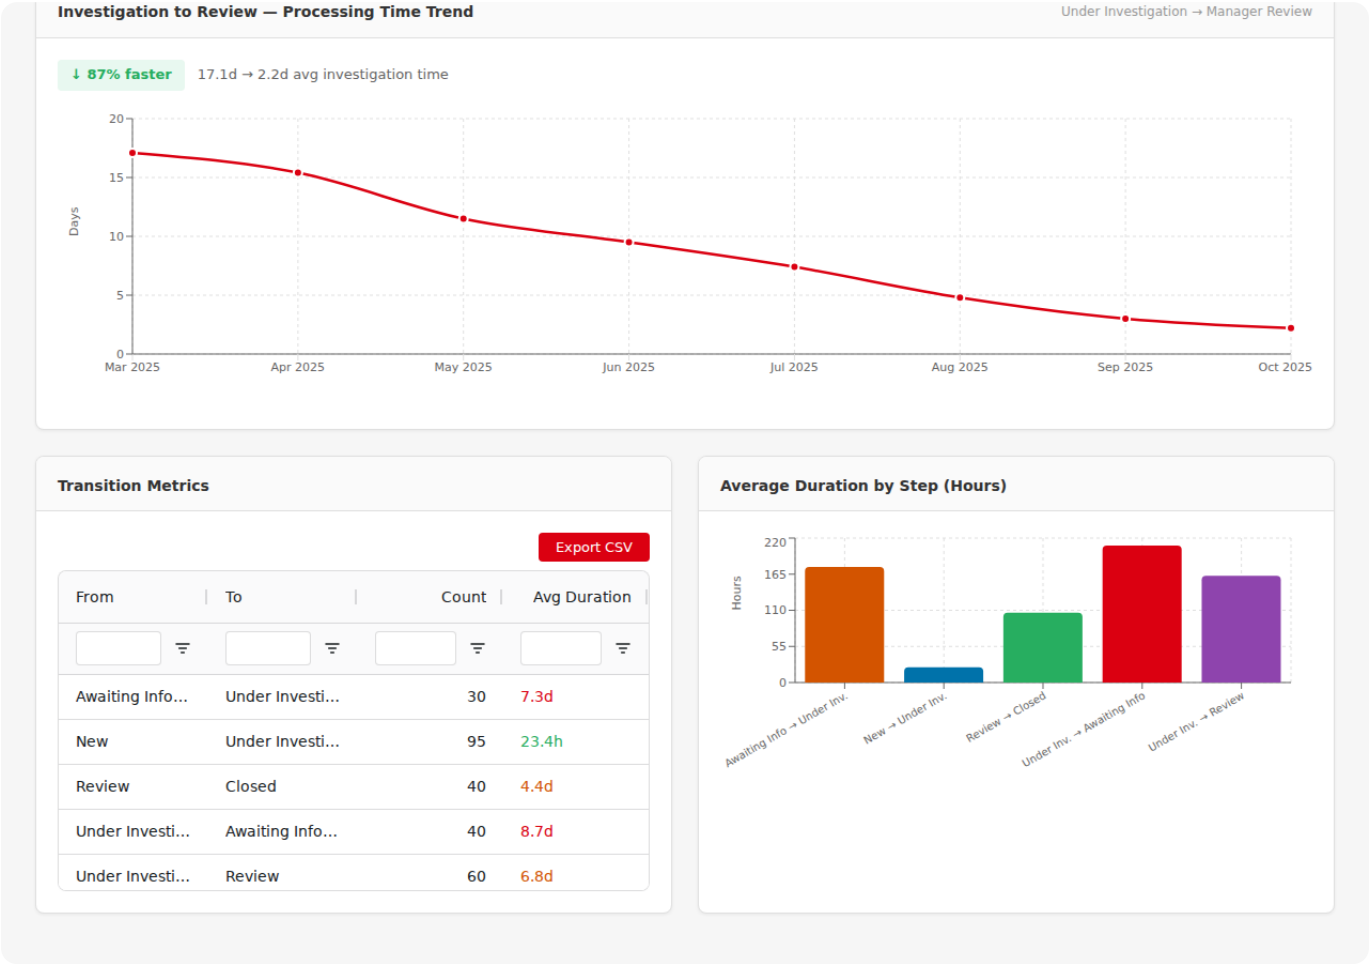


One screen. Five status categories. Every case. Filterable by case type, country, and line of business — so every team sees the data that matters to them.

Prove You're Getting Faster

Month-over-month trend analysis with automatic improvement calculation

The platform tracks the average time to process a case from Under Investigation to Manager Review — the most critical handoff in the investigation lifecycle — and charts the trend over time.



↓ 87% faster

17.1 days → 2.2 days average investigation time (March – October 2025)

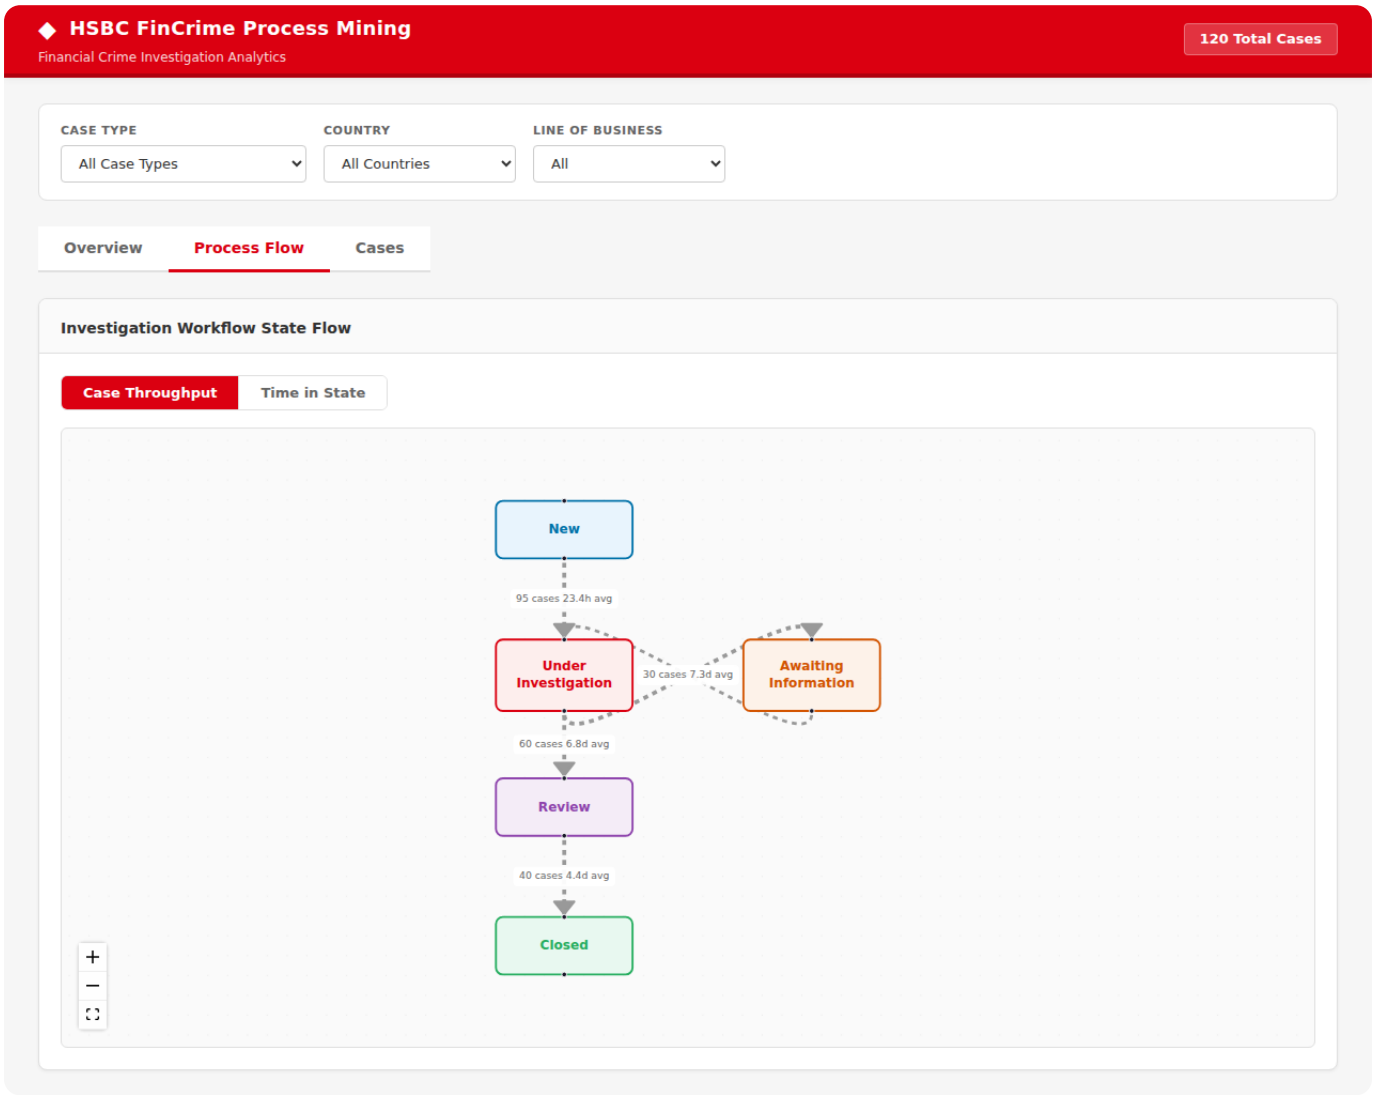
This is the single most powerful data point in any operational improvement story. Present it to regulators, to senior management, or at your quarterly business review — the improvement speaks for itself.

> The platform also shows colour-coded duration metrics for every state transition, instantly identifying which handoffs are fast (green), acceptable (orange), or too slow (red).

Visualise the Investigation Workflow

Interactive state flow diagram with throughput and dwell time views

See exactly how cases move through your process — from New through Under Investigation, Awaiting Information, Manager Review, and finally Closed.



Toggle between two views:

▶ Case Throughput

See how many cases flow along each path, with average processing time on every edge. Line thickness scales with volume.

⏱ Time in State

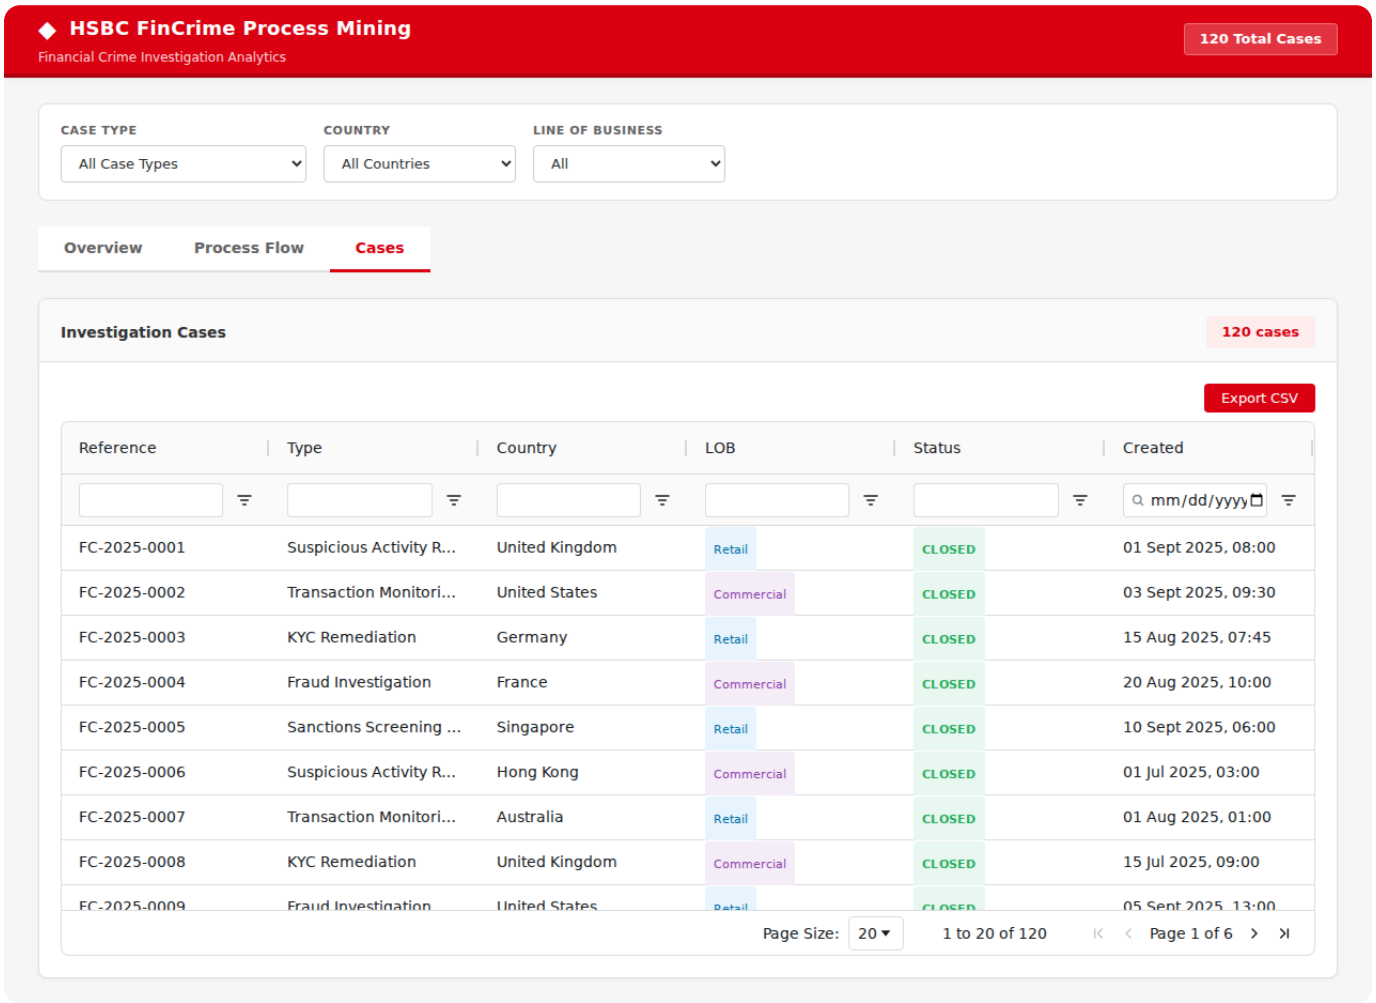
See weighted average dwell time on each node, highlighting where cases spend the most time. Target that stage for improvement.

Edge thickness scales with volume, making high-traffic paths and bottlenecks immediately visible to any stakeholder — no data literacy required.

Full Case Visibility & Audit Trail

Enterprise-grade data grid with drill-down to every state change

Browse all investigation cases in a sortable, filterable, searchable data grid. Every column supports free-text search and sorting. Export to CSV with one click.



Click any case to see its complete transition timeline — every status change, when it happened, and who made it. Full regulatory traceability.

Platform Capabilities

Everything operations leaders need — nothing they don't

Real-Time Status Dashboard

Live case counts across 5 workflow stages. Colour-coded cards update instantly when filters change.

Trend Analysis

Month-over-month processing time trend with automatic improvement percentage calculation.

⚙ Process Flow Diagram

Interactive state diagram with case throughput and time-in-state views. Bottleneck identification at a glance.

Full-Text Search & Filtering

Every column in every table is sortable, filterable, and searchable. Find any case in seconds.

One-Click CSV Export

Export any dataset for offline analysis, regulatory submissions, or inclusion in management reports.

Case Drill-Down

Click any case to see the complete audit trail — every state change with timestamp and user attribution.

Global Filters

Filter by case type, country, or line of business. Every chart, table, and metric updates simultaneously.

Transition Metrics

Colour-coded average durations for every state-to-state handoff. Green (<2d), orange (2-7d), red (>7d).

Business Impact

Measurable outcomes from day one

87%	120	5	7
FASTER INVESTIGATION PROCESSING	CASES TRACKED IN REAL TIME	INVESTIGATION TYPES SUPPORTED	COUNTRIES COVERED

Who Benefits

STAKEHOLDER	VALUE DELIVERED
Head of FinCrime Ops	End-to-end process visibility, evidence of operational improvement for board and regulators
Team Leads / Managers	Workload distribution, country and LOB-specific performance views
Process Transformation	Data-driven bottleneck identification, before-and-after measurement
Internal Audit / Compliance	Full audit trail, exportable data, regulatory-ready case timelines
Technology / Architecture	Lightweight, modern stack that integrates with existing case management systems

Use Cases

Quarterly Business Review
Show the 87% improvement trend chart. Export metrics as CSV. Present concrete evidence of transformation.

Daily Operations Stand-Up
Filter to your country and LOB. Check cases stuck in Awaiting Information. Click into any case to see who last touched it.

Regulatory Examination
Demonstrate full traceability. Show the complete timeline for any case. Export the full case list for the examiner.

Process Re-Engineering
Switch to Time in State view. Identify the slowest stage. Target it for improvement. Measure impact next quarter.

Ready to Transform FinCrime Operations?

Stop guessing. Start measuring.

Real-time visibility. Proven improvement. Full traceability.
